Academic.Registrar@cmsa.co.za

**JOHANNESBURG OFFICE**  
**EXAMINATIONS & CREDENTIALS**

**October 2021**

**R E G U L A T I O N S**  
**FOR ADMISSION TO THE FELLOWSHIP OF**  
**THE COLLEGE OF UROLOGISTS OF SOUTH AFRICA**  
**FC Urol(SA)**

The examination comprises Primary, Intermediate and Final: The Final must be passed within six years of passing the Intermediate and within nine years of passing the Primary

**1.0 ADMISSION TO THE EXAMINATION**

Read in conjunction with the Instructions for Admission to CMSA Examinations

**1.1 PRIMARY** (Adapted from the College of Surgeons(SA))

1.1.1 a qualification to practice medicine which is registered or registerable as a Medical or Dental Practitioner with the Health Professions Council of South Africa (HPCSA)

1.1.2 The General Surgical Primary examination is used for candidates wishing to proceed to other surgical specialities. The rules of the other surgical specialities vary and it is incumbent on prospective candidates to check the appropriate college's regulations before applying for admission to the general surgical primary examination.

**1.2 INTERMEDIATE** (Adapted from College of Surgeons(SA))

A candidate may be admitted to the Intermediate examination having:

1.2.1 passed the Primary

1.2.2 completed not less than 12 months of approved training as a registered medical practitioner, in surgery. Training during community service cannot be submitted.

Of the 12 months training called for, not less than 6 months must be spent in general surgery, not less than 3 months must be spent in ICU and not less than 3 months in trauma/emergency surgery.

1.2.3 **NOTE:**

1.2.3.1 The Primary and Intermediate examinations may be attempted concurrently with the proviso that if the Primary is failed and the Intermediate passed, no credit will be given for passing the Intermediate which will have to be retaken

1.2.3.2 The CMSA Senate, through its Examinations and Credentials Committee, will review all applications for admission to the examination and may also review the professional and ethical standing of candidates

**2.0 FORMAT OF THE EXAMINATION****2.1 PRIMARY**

Refer to the FCS (Primary): For General Surgery

**2.2 INTERMEDIATE**

Refer to the FCS (Intermediate): For General Surgery

**2.3 FINAL<sup>1</sup>**

(to be read in conjunction with the Instructions)

A candidate may be admitted to the Final examination having

2.3.1 passed the Primary and Intermediate of the examinations of the College of Surgeons, or the completed Fellowship of one of the Colleges with which there is an agreement of reciprocity.

2.3.2 produced evidence of having

2.3.2.1 been qualified to practise for a period of not less than four years (1 or 2 years of internship **NOT** to form part of this period)

2.3.2.2 served a period of not less than 3½ years (42 months) approved training in a post registered with the HPCSA (ie a registrar post, excluding medical officer posts) in urology

2.3.2.3 produced at the time of registering for the examination, a certificate covering a minimum of 3½ years (42 months) of urology training completed at the time of registration (this period excludes all training time used for admission to the Intermediate examination)

2.3.2.4 submitted a completed portfolio of learning three months prior to the written examination. *[SEE APPENDIX C FOR GUIDELINES]*

2.3.3 A candidate will only be allowed to enter an examination a fourth time if they comply to the following rules:

2.3.3.1 The candidate must undergo a year of remedial training before they can apply to write the final examination again

2.3.3.2 A program of the format of the remedial training must be developed in conjunction with the candidate's Head of Department and this program must be submitted to the President of the College of Urologists for approval.

2.3.3.3 At completion of the year of remedial training the candidate's Head of Department must submit a report to the President of the College of Urologists certifying that the candidate has completed the remedial training successfully before the permission should be granted.

**3.0 SYLLABUS FOR THE FINAL EXAMINATION**

The theory and practice of clinical urology.

*[SEE APPENDIX D FOR GUIDELINES]*

**4.0 CONDUCT OF THE FINAL EXAMINATION**

**4.1 TYPED EXAMINATIONS USING THE SPEEDWELL SYSTEM (This examination will NO LONGER be hand-written)**

4.1.1 Two 3-hour examination papers will be conducted (additional type concession time of 45 min/paper will be offered to candidates who may require it)

4.1.2 Each paper consisting of 4 Questions, with 4-6 sub-questions (5-10 Marks each)

4.1.3 Each paper mark Totals 150

**4.2 Clinical, practical and oral examinations in urology, conducted by a panel of examiners appointed by the College of Urologists.**

*[SEE APPENDIX D FOR GUIDELINES]*

5.0 ADMISSION AS A FELLOW

5.1 Only candidates who have completed training in a CMSA recognised registrar post may be awarded a fellowship if successful in the examination.

5.2 Candidates who have written the examination as a prerequisite from the HPCSA for inclusion on the specialist register are not eligible to be awarded a Fellowship but will be sent a letter confirming their success in the examinations

All other candidates will be asked to sign a declaration as below:

I, the undersigned, ..... do solemnly and sincerely declare

that while a member of the CMSA I will at all times do all within my power to promote the objects of the CMSA and uphold the dignity of the CMSA and its members

that I will observe the provisions of the Memorandum and Articles of Association, By-laws, Regulations and Code of Ethics of the CMSA as in force from time to time

that I will obey every lawful summons issued by order of the Senate of the said CMSA, having no reasonable excuse to the contrary

and I make this solemn declaration faithfully promising to adhere to its terms

Signed at ..... this ..... day of

..... 20 .....

Signature .....

Witness .....

(who must be a Founder, Associate Founder, Fellow, Member, Diplomate or Commissioner of Oaths)

5.3 A two-thirds majority of members of the CMSA Senate present at the relevant meeting shall be necessary for the award to any candidate of a Fellowship

5.4 A Fellow shall be entitled to the appropriate form of certificate under the seal of the CMSA

5.5 In the event of a candidate not being awarded the Fellowship (after having passed the examination) the examination fee shall be refunded in full excluding HPCSA candidates who are not entitled to a Fellowship.

5.6 The first annual subscription is due one year after registration (statements are rendered annually)

## APPENDIX A

### 1.0 AIMS, OBJECTIVES AND SYLLABUS FOR THE PRIMARY EXAMINATION IN GENERAL SURGERY

1.1 The aim of the examination is to ensure that successful candidates are competent to embark on a career in General Surgery or one of its subspecialties. The examination will help refresh existing knowledge and impart new knowledge and competencies to ensure better care of the surgical patient. The competencies required are in the cognitive, psychomotor and affective (interpersonal/attitudinal) domains

1.2 Competence is defined as knowledge, skills and attitudes in:

- medical expertise
- technical expertise
- judgement – clinical decision making
- communication
- collaboration and teamwork
- management and leadership
- health advocacy
- scholarship and teaching
- professionalism.

1.3 Areas of competence that will be assessed in the FCS(SA) Primary examination will include:

- Clinically relevant anatomy and applied embryology
- Appreciation of three dimensional and cross sectional relevant anatomy
- Clinically relevant human physiology
- Pathophysiology in surgical patients
- General pathology principles and mechanisms of disease
- The genetic basis of disease
- Oncological principles in surgery
- Immunology
- Principles of microbiology relevant to general surgical practice
- Asepsis and antisepsis
- Pharmacological principles relevant to surgery
- Pharmacology of drugs commonly used in surgery
- Blood constituents, clotting mechanisms and blood product transfusion principles
- Fluid requirements and fluid management in the surgical patient
- Acid–base problems in the surgical patient
- Applied medical statistics
- Critical appraisal of the literature
- Evidence based literature
- Searching the literature
- Informed consent
- HPCSA regulations pertaining to surgical practice
- Basic clinical skills
- Basic procedural skills
- Counselling of patients and relatives
- Safety in the operating room
- Principles of audit
- Principles of patient documentation
- Principles of continuity of care
- The content of the Basic Surgical Skills course manual
- Learning in medicine is a continual process. Although general and specific objectives have been set, any aspect of medicine that is deemed to be surgically relevant may be included in the assessment

- As a guide, the Specialty of Surgery (General Surgery) covers the following areas:
  - Alimentary tract
  - The abdomen and its contents
  - Breast, skin and soft tissue
  - Endocrine system
  - Head and neck surgery
  - Vascular surgery
  - Paediatric surgery
  - Trauma surgery/burns
  - Surgical critical care
  - Surgical oncology

## 2.0 SPECIFIC/LEARNING OBJECTIVES

### 2.1 Clinically relevant anatomy and applied embryology:

- 2.1.1 Detailed knowledge of anatomy is required. Clinically relevant anatomy should be concentrated on. The anatomy of the whole body should be known in some detail. It is expected however that the candidate should concentrate on the anatomy, surface anatomy, applied anatomy and embryology of:
- Those structures commonly affected by disease encountered by the general surgeon
  - Those anatomical structures and their anatomical relationships which are important in general surgical operations
- 2.1.2 Anatomical variations are common and often pose challenges to the practising surgeons. The anatomical variations that impact on presentation of disease and /or surgical exposure should be known in detail, as should the embryological basis of the variation
- 2.1.3 The embryological origin of organs should be known. Emphasis will be placed on common anatomical variations/abnormalities that have an embryological origin
- 2.1.4 The following areas of applied gross anatomy should be concentrated on:
- Brain and skull with emphasis on areas affected by trauma and space occupying lesions
  - The cranial nerves
  - The face
  - Bony structures of the sinuses, orbit, jaw
  - The tongue and pharynx
  - Salivary glands
  - The neck
  - The chest
  - The mediastinum
  - The thoracic inlet and outlet, the brachial plexus
  - The axilla
  - The muscles of the neck and back
  - The peripheral vascular system
  - The lymphatic system
  - The heart
  - The diaphragm
  - The abdominal wall
  - The abdominal contents
  - The retroperitoneum
  - The pelvis (its contents and foramina, the pelvic floor)
  - The pelvic bones
  - The anus and continence mechanisms
  - The peripheral nervous system
  - The autonomic nervous system
  - The spine
  - The spinal cord and its neuroanatomy
  - The cubital fossa
  - The popliteal fossa
  - The gluteal area

- The perineum
- Female genitalia (internal and external)
- Male genitalia
- The extremities. Emphasis to be placed on vital structures (nerves, blood vessels), major muscle groups, compartments, vital structures in the joints, relationship of vital structures to bones
- The hand, with emphasis on vital structures, function and areas prone to infection

## 2.2 **Appreciation of three dimensional and cross sectional relevant anatomy:**

2.2.1 Current imaging with CT and MRI is cross sectional, but more and more axial and saggital scanning is being performed. In addition, three dimensional reconstruction is common. The candidate would be expected to be able to identify normal anatomical structures in such images

## 2.3 **Clinically relevant human physiology:**

2.3.1 Candidates should have detailed knowledge of:

- Homeostasis, thermodynamics, positive and negative feedback
- Fluid and electrolyte and acid-base physiology and pathophysiology
- Body water compartments
- Composition, osmotic activity and oncotic pressure of body fluids
- Water and electrolyte exchange
- Mechanisms of osmoregulation and volume regulation
- Buffer systems and mechanisms of acid-base haemostasis
- The haemopoietic system
- Lung function and respiratory exchange and oxygen transport. Control of respiration and breathing. Ventilatory response to exercise. Measuring lung function. Ventilation perfusion ratios, control of pulmonary circulation
- Oxygen transport:\
- Renal function: control systems with respect to microanatomy, autoregulation, regulation of GFR, renal tubular function (in health and disease), the effect of diuretics, the effect of obstruction at various points, bladder function and control (in health and disease)
- Adrenal function
- Function of the GIT in digestion, motility and transit, absorption
- The secretions of the GIT
- Hepatic function
- Nutrition:
  - The interrelationship between fat, carbohydrate and protein metabolism and changes with under and over nutrition. The role of trace elements and vitamins in nutrition. The nutritional impact of surgery and injury
- Cardiac function, electrophysiology and circulation
- Physiology of the peripheral vascular system and microvasculature
- Physiology of the splanchnic, hepatic circulation
- Placental and fetal circulation
- Control of blood pressure
- The endothelium
- The extracellular space and lymph systems
- The cardiovascular response to exercise and stress
- The role of Nitric Oxide
- Neurophysiology:
  - Cell membrane excitability, intercellular signaling, somatic and autonomic nervous systems, cerebral function, the functional role of the basal ganglia, limbic system, hypothalamus brainstem and reticular activating system, reflex controls, spinal neurophysiology, the cortex (and its role in speech, sensory perception and motor control), the cerebellum (and its role in fine motor coordination), the cranial nerves
- The CSF and blood brain barrier
- Endocrine function (pituitary, thyroid, parathyroid, adrenal medulla and cortex, pancreas, kidney, sex hormones)

➤ The regulation of .../

- The regulation of body function in response to exercise, trauma, starvation, sepsis and stress of surgery
- Paracrine and autocrine function
- The different physiology of the neonate, child, the pregnant woman and the elderly must be understood

## 2.4 PATHOPHYSIOLOGY IN SURGICAL PATIENTS

2.4.1 It is expected that the candidate will have a clear understanding of normal human physiology and recognise how this may be altered by pathological processes, surgery or anaesthesia. Correlation between physiological changes and physical signs or symptoms elicited in patients should be clearly understood. For example, there should be a clear understanding of the physiological changes that:

- ensue in a patient following prolonged vomiting or diarrhoea,
- occur in renal function after surgery
- prevail in a patient with a perforated duodenal ulcer
- occur during and after major surgery
- occur with deep obstructive jaundice
- affect fluid balance in the surgical patient

2.4.2 The pathophysiological effects of insult to the neonate, child, the pregnant woman and the aged must be understood

2.4.3 Interpretation of laboratory results in a clinical scenario eg:

- Fluid, electrolyte and acid base disturbances and their identification
- Acid base abnormalities
- Haemostasis

## 2.5 GENERAL PATHOLOGY PRINCIPLES AND MECHANISMS OF DISEASE

2.5.1 Candidates should demonstrate an understanding of the general pathological mechanisms (degenerative, reactive and neoplastic) underlying common disease. This will include knowledge of aetiology, pathogenesis, epidemiology, investigation and natural history. Areas to be concentrated on are:

- General pathological phenomena including cell injury, adaptation and death, inflammation, apoptosis, cell death, degenerations including atherosclerosis, pigmentation and calculus formation, alterations of growth, differentiation and function of cells and of age
- The effects of aging on the body
- Tissue response to injury including the adaptive reactions of the body to injury. This includes an understanding of important morphological manifestations, pathophysiology of important disease states (eg major organ failure either single or combined, shock, sepsis, disseminated intravascular coagulation), biochemical mechanisms and manifestations where these factors are important in the understanding of pathogenesis, natural history
- The processes of wound healing and tissue inflammation (acute and chronic)
- The principles of cellular events and resulting in local and systemic inflammatory responses. This includes knowledge of the common cytokines and other mediators of inflammation
- Common and important issues in systemic pathology are examinable in so far as:
  - (i) a given lesion exemplifies a basic pathological process, eg anaphylaxis as an example of hypersensitivity reactions, myocardial infarction in atherosclerosis, colorectal carcinoma as an example of neoplasia, or
  - (ii) disorders of a given system are likely to be encountered in surgical practice, eg post-operative pneumonia
- Knowledge of laboratory medicine

## 2.6 THE GENETIC BASIS OF DISEASE (Genetics and Molecular Biology)

2.6.1 Structure of DNA and RNA, the cell cycle, the generation of genetic abnormalities

2.6.2 Mendelian genetics

2.6.3 Cytogenetics including basics of laboratory techniques for detection of cytogenetic abnormalities

2.6.4 Specific conditions are examinable in so far as they illustrate important principles or are common or important disorders

**2.7 ONCOLOGICAL PRINCIPLES IN SURGERY**

2.7.1 An understanding of Cancer biology is essential. The following specific aspects pertaining to oncology should be known in detail:

- Cells and tissues of origin
- Reproductive, growth (proliferative) patterns and host interaction
- Mechanisms of invasion and metastasis
- Molecular biological, genetic and inherited characteristics
- Geographic racial and cultural (population) factors
- Mechanisms and types of chemical, physical and microbial carcinogenesis
- Distinctive pathological (macroscopic, histological and immunochemical) features which aid diagnosis
- The application of the above to common cancers in children and adults
- Principles of oncological surgery
- Basic mechanisms of action of current common chemotherapeutic agents

**2.8 Immunology:**

2.8.1 Basic Immunology including:

- non-specific defence mechanisms, the complement system, the major histocompatibility complex
- the cells of the immune system, their functions, their interactions, cell subsets, cell surface markers and receptors structure, function, genetics of secretory products of cells involved in the immune response including immunoglobulins, interleukins, various other factors activation and control of the normal immune response
- Immunity infection including bacteria, viruses, fungi and protozoa
- Abnormal Immunological Responses including hypersensitivity, autoimmune disorders and immunodeficiency disorders
- Diagnostic Immunology including the basic principles (not detailed) of commonly used immunological tests, their applications and their limitations
- Immunology pertaining to blood product transfusion

**2.9 Transplantation:**

- Define and differentiate autografts, allografts and xenografts
- Understand the role of major histocompatibility complex in clinical transplantation

**2.10 PRINCIPLES OF MICROBIOLOGY RELEVANT TO GENERAL SURGICAL PRACTICE**

An understanding and knowledge of infectious agents (viruses, bacteria, fungi, protozoa and sub-viral particles eg prions) in surgical disease processes and of the developing microbial resistance to current antimicrobials is essential

- Pathogenesis of infection
- Host defence mechanisms and microbial virulence:
  - The normal microbial flora of the body and its role in health and disease
  - Surgically relevant bacterial, viral, fungal and parasitic infections;
  - infection following surgery, eg wound infection, septicaemia
  - infections with surgical implications, eg peritonitis, anaerobic soft tissue infections, AIDS
  - The principles of antimicrobial agents and their scientific use in the therapy and prevention (prophylaxis) of infection
  - Sterilisation and disinfection
  - Laboratory medicine aspects of infectious diseases, eg principles behind blood culture techniques, interpretation of gram stains, antimicrobial susceptibility techniques

**2.11 PRINCIPLES OF PHARMACOLOGY AND THERAPEUTICS IN GENERAL SURGERY**

- Pharmacological principles relevant to surgery and Pharmacology of drugs commonly used in surgery
- The following *principles* are to be covered in detail:
- Pharmacodynamics and pharmacokinetics of major drug groups
- The pharmacodynamics includes the mechanism of action of a drug, particularly where it may be important in understanding its use and/or its side-effects, whereas the pharmacokinetics include factors such as bioavailability (particularly to emphasise difference in routes of administration), plasma protein binding, clearance (metabolism if relevant) etc. The clinical application of pharmacodynamics and pharmacokinetics in route of administration, dosage and dosing schedules, the effect of disease states on drugs, the effect of the drug on the patient, and potential clinically relevant drug interactions
- The changes in the neonate, child and elderly that effect pharmacodynamics and pharmacokinetics
- The above principles pertaining to the following drug groups should be emphasised:
  - Pain killers
  - Diuretics
  - Inotropes, vasoconstrictors, vasodilators, anti arrhythmics
  - Immune modulators including steroids and anti-inflammatories
  - Antimicrobials
  - Drugs affecting the GIT eg those affecting gastric acid secretion, gut motility, stool transit time
  - Drugs affecting haemostasis eg Heparin, Warfarin, Fractionated Heparin, Thrombolytics
  - Anaesthetic drugs (Inhalational, oral, and intravenous)
  - Local anaesthetics
  - Drugs affecting glucose metabolism eg insulin, oral hypoglycaemics
  - Cytotoxics, Anti-oestrogens eg Tamoxifen
  - Thyroxin and anti-thyroid drugs

**2.12 HAEMATOLOGY AND TRANSFUSION**

- The following aspects should be known in detail:
  - The origin and differentiation of haematopoietic cells
  - Anaemias of acute and chronic blood loss. Basic investigations to differentiate various causes of anaemia eg types and mechanisms of haemolysis, anaemias caused by substrate deficiency
  - Mechanisms of haemostasis. Tests of haemostasis and their clinical application
  - Abnormal haemostasis
  - Bleeding disorders, congenital and acquired
  - Disseminated intravascular haemostasis
  - Origin, differentiation and proliferations of white cells particularly lymphomas
  - Blood products, components and substitutes

**2.13 ASEPSIS AND ANTISEPSIS**

- Blood constituents, clotting mechanisms and blood product transfusion principles
- Fluid requirements and fluid management in the surgical patient

**2.14 CRITICAL APPRAISAL OF THE LITERATURE, EVIDENCE BASED MEDICINE AND SEARCHING THE LITERATURE**

- With the explosion of available medical literature, the candidate should understand the key concepts of Evidence Based Medicine (EBM), levels of evidence and how to effectively and efficiently search the literature

**2.15 LEGAL AND ETHICAL ISSUES**

- Candidates should know the ethical and legal principles relating to:
  - Informed consent
  - Confidentiality and access to health records
  - Filling out a death certificate
  - Medico-legal post mortems
  - Obtaining permission for autopsy
  - Withholding resuscitative measures
  - Organ donation
  - Brain death
- HPCSA regulations pertaining to surgical practice including issues of professional misconduct

2.16 **APPLIED MEDICAL STATISTICS, BIostatISTICS, EPIDEMIOLOGY**

- The candidate should:
  - Understand the principles of biostatistics and research design and commonly used statistical tests and terminology as necessary to critically appraise the clinical and experimental surgical literature
  - Understand the principles of biostatistics and epidemiology applicable to the use of diagnostic tests, screening and disease prevention programmes, patterns of disease (eg trauma, cancer), risk assessment, scoring systems (eg physiologic and anatomic scoring of trauma, neurologic function etc), prediction of outcome etc
  - Identify the meaning and appropriate usage of commonly used terms, including sensitivity, specificity, positive predictive value, negative predictive value, false positive, false negative, confidence limits, standard deviation, retrospective, prospective, intention to treat, power, randomised trial, control, blind, double blind, relative risk reduction, number needed to treat, meta analysis, systematic review
  - Identify types 1 and 2 statistical errors and the factors influencing them
  - Identify the requirements for the appropriate usage of common statistical comparison, including test, chi-square, ANOVA, correlation, regression, non-parametric testing”

2.17 **THE BASIC SURGICAL SKILLS COURSE**

- It is expected that all candidates have successfully completed the Basic Surgical Skills course that is run under the Aegis of the Colleges of Medicine of South Africa under licence from the Royal College of Surgeons of England
- The following are examinable:
  - Asepsis and antisepsis
  - Safety in theatre
  - The principles of anastomosis
  - Suture materials and needles
  - The principles of debridement
  - Diathermy principles and safety
  - Basic principles of laparoscopy

2.18 **Suggested texts for new FCS(SA) Primary:**

- Raferty AT, Delbridge MS. *Basic Science for the MRCS*. Churchill Livingstone, Elsevier Science, 2006. ISBN-13 978-0-443-10109-0
- Raferty AT. *Applied Basic Science for Basic Surgical Training*. Churchill Livingstone, 2000. ISBN 0 443 06143 2
- Winscow TDV, Campbell MJ. *Statistics at Square One 10<sup>th</sup> Edition*. BMJ Books, 2002. ISBN 10 : 0 72791552 5
- Basic Surgical Skills Manual; Third edition

The above texts are highly recommended and cover almost the entire syllabus of the FCS Primary. It is expected, however, that the following texts be used as references for a deeper understanding of the basic sciences

- **Anatomy:**
  - Snell, Richard S. *Clinical Anatomy*. 7th Edition. Lippincott Williams and Wilkins, Philadelphia, 2004
  - McMinn R.M.H., *Last's Anatomy, Regional and Applied*, 9th Ed., 1998 (Reprinted 2003) Churchill Livingstone
  - Abrahams PH, Marks SC, Hutchings RT. *Mc Minns Color Atlas of Human Anatomy*. CV Mosby 2003 ISBN 0723432120
- **Physiology:**
  - Ganong W.F *Review of Medical Physiology*, 21th Ed., 2005, Lange Mc Graw-Hill  
or
  - Guyton, AC, Hall JE. *Text Book of Medical Physiology*, 11th Ed. Elsevier. 2000
- **Pathology:**
  - McPhee SJ, Lingappa, VR, Ganong WF. *Pathophysiology of Disease. An introduction to clinical medicine*. Fourth Edition Lange Medical Books/ McGraw-Hill 2003
  - Really Essential Medical Immunology: *Ivan Roitt & Arthur Rabson*
  - Cotran, Ramzi S. Joint authors/editors: Robbins, Stanley L. Kumar. V, Tucker. C *Robbins pathologic basis of disease*. 3<sup>rd</sup> ed. Philadelphia: London: Saunders, c1999

## APPENDIX B

### GUIDELINES FOR CANDIDATES ENTERING THE FCS(SA) INTERMEDIATE EXAMINATION

#### FCS(SA) Intermediate Objectives

*Cf (Cross Reference) with FCS (Intermediate): General Surgery*

#### Overall objectives

The candidate is required to know and understand the principles of surgery in general and the principles of the major specialities of surgery. It is expected that the candidate will have the theoretical knowledge and practical skills to deal with:

- all aspects pertinent to the resuscitation and emergency treatment of life threatening surgical conditions in both adults and children.
- all aspects of patient care relevant to the peri-operative period, including intensive care support,

#### General Learning Outcomes

- Demonstrate understanding of the principles and practical application of supportive surgical care including emergency care.
- Demonstrate understanding of the principles and practical application of care related to the other surgical specialities with particular focus on emergency care. These specialities are Orthopaedics, Urology, Plastic Surgery, Cardiothoracic Surgery, Paediatric Surgery, Neurosurgery, Ophthalmology, Otorhinolaryngology and Obstetrics and Gynaecology including emergency care.
- Demonstrate knowledge of relevant clinical anatomy, physiology and pathophysiology behind the general principles and interpretation and application of commonly used diagnostic tests and imaging modalities.
- Demonstrate understanding of applied pathophysiology relevant to peri-operative care of the surgical patient including organ support in critical illness.

### FCS(SA) INTERMEDIATE PAPER I: PRINCIPLES OF SURGERY IN GENERAL

#### General Objectives

The candidates are required to know and understand the principles of surgery in general. It is expected that the candidates will have the theoretical knowledge and practical skills to deal with:

- all aspects pertinent to the resuscitation and emergency treatment of life threatening surgical conditions in both adults and children.
- all aspects of patient care relevant to the peri-operative period, including intensive care support.

#### 1.0 A: SUPPORT IN CRITICAL ILLNESS :

##### 1.1 General objectives

Understand the anatomical, physiological and pathophysiology principles involved in the practical provision of major organ support for the critically ill surgical patient relating to the following topics:

##### 1.2 Support of oxygenation and ventilation

Understand the anatomical and practical principles involved in airway management in relation to the following headings.

- Simple measures
- Endo-tracheal intubation
- Intubation of the difficult airway
- Surgical airways

Understand lung physiology and pathophysiology as applicable to mechanical ventilation with particular reference to the following topics.

- Lung functions
- Peri-operative evaluation of lung function
- Lung volumes and capacities
- Problems with the alveolo-capillary interface
- The interpretation of blood gas analysis

Understand the physiology behind oxygenation in the ventilated patient with particular reference to the following topics

- Hypoxia and hypoxaemia
- $DO_2 / VO_2 / SvO_2$
- Oxygen consumption in critical illness
- Oxygen therapy / PEEP / CPAP

Understand the principles behind the practical provision of mechanical ventilation under the following headings

- Indications for ventilation
- Non-invasive ventilation
- Modes of ventilation
- Lung protective ventilation
- Alveolar recruitment
- Weaning measures and protocols
- Lung mechanics and monitoring

Understand the mechanism and management of pulmonary aspiration syndromes and infections.

Understand the pathophysiology and management of acute lung injuries under the following headings

- Inflammatory
- Infective
- Ventilator associated

### 1.3 **Support of the circulation systems**

Understand the classification, pathophysiology, clinical presentation and treatment of shock under the following headings

- Hypo-volaemic / haemorrhagic shock
- Cardiogenic shock (cardiac and extra-cardiac)
- Septic / redistributive shock
- Anaphylactic / allergic shock
- Neurogenic shock and the difference to spinal shock
- Free oxygen radicals and reperfusion injuries
- Lactic acidosis
- Endpoints of resuscitation
- Understand the pharmacology and practical use of cardiovascular drugs in critical illness under the following categories
- Inotropic agents
- Anti dysrhythmic agents
- Vasodilators
- Vasopressors

Understand the pathophysiology and practical principles involved in managing acute cardiac disturbances under the following headings

- ECG interpretation
- Cardiac arrest
- Cardiopulmonary resuscitation
- Defibrillation
- Electric and mechanical support of the failing heart
- Cardiac dysrhythmias. Interpretation of the ECG
- Hypertensive crisis

**1.4 Monitoring Devices**

Understand the principles, application, interpretation, and complications of the following devices used in monitoring patients with critical illness

- Pulse oximetry
- Arterial, central venous and Swan Ganz catheters
- Endotracheal cuff pressure
- Capnography, calorimetry and metabolic monitoring
- Tonometry
- Thrombo-elastography
- Oesophageal Sonar

**1.5 Temperature Control of the Patient**

Understand the mechanisms of thermal loss and the principles and practical application of preventative and restorative treatment measures.

- Hypothermia
- Hyperthermia including malignant hyperpyrexia

**1.6 Inflammatory Syndromes and Organ dysfunction**

Know and understand the definitions, underlying pathophysiology and management of inflammatory syndromes and organ dysfunction under the following headings.

- SIRS Systemic Inflammatory Response Syndrome
- CARS Compensated Anti-inflammatory Response Syndrome
- MARS Mixed Anti-inflammatory Response Syndrome
- MODS Multiple Organ Dysfunction Syndrome
- MOF Multiple Organ Failure
- Scoring systems

**1.7 Intra-abdominal Hypertension**

Understand the pathophysiology and practical management of raised intra-abdominal pressure under the following headings

- Measurement of Intra-abdominal pressure
- Abdominal Compartment Syndrome
- Content containment techniques

**1.8 Transport of the critically ill patient**

Understand the principles and practical aspects of the transfer of critically ill patients.

**1.9 Endocrine and Metabolic aspects of critical illnesses**

Understand the physiological and pathophysiological principles involved in endocrine and metabolic abnormalities and their practical application in the treatment of these conditions.

- Endocrine
  - Glycaemic control
  - Diabetes Insipidus
  - Adreno-cortical Insufficiency
  - Thyroid Storm
  - Adrenergic crisis
- Metabolic
  - Acid Base disturbances
  - Hyperkalaemia
  - Hypercalcaemia

**1.10 Nutritional aspects of critical illnesses**

Understand the physiological and pathophysiology principles involved in the practical provision of nutritional support both enteral and parenteral of the critically ill patient under the following headings

- Nutrient provision
- Access
- Complications

**1.11 Renal Failure**

Understand the physiological and pathophysiological principles involved in the diagnosis and supportive management of renal failure under the following headings

- Acute renal failure
- Myoglobinanaemia and myoglobinuria
- Haemodialysis
- Peritoneal dialysis
- Ultrafiltration

**2.0 B: PERI - OPERATIVE CARE:****2.1 General objective**

Understand the principles involved and their practical application in the provision of perioperative surgical care under the following topics.

**2.2 Co-morbidity risk**

Understand the principles of assessment of general and disease specific co-morbidity risk and the optimisation of patients for procedures or surgery under the following headings.

- Cardiac
- Pulmonary
- Hepatic
- Renal
- Endocrine
- Obesity
- Age
- Medications

**2.3 Abnormalities of homeostasis**

Understand the physiological reasons underlying the principles of assessment and management of abnormalities of homeostasis related to the following

- Metabolic response to injury
- Fluid and electrolyte therapy
- Acid base balance

**2.4 Haemostatic disorders**

Understand the anatomical, physiological and pathophysiological principles involved in haemostasis and their practical application in the treatment of haemostatic disorders.

- Laboratory Investigations
- Component Therapy
- Thrombosis and Thrombo-Embolic
- Deep Venous Thrombosis
- Pulmonary Embolism
- Haemostatic Failure and DIC
- Anticoagulant Therapy
- Thrombolytic Therapy

**2.5 Surgical Nutrition**

Understand the principles of nutritional assessment, the recognition of nutritional deficiency and the practical provision of nutritional support in the surgical patient related to the following

- Assessment of nutritional status.
- Indications for nutritional support.
- Calculation of nutrient requirements.
- Parenteral and enteral nutrition
- Access
- Provision
- Complications
- Metabolic related
- Delivery related

**2.6 Endocrine conditions**

Understand the pathophysiology and the principles of diagnosis and management of endocrine emergency conditions and the management of endocrine conditions in relation to surgery under the following headings.

- Hyper and hypothyroidism
- Hypercalcaemia
- Steroid therapy
- Hypo and hyper adrenal function
- Hypo and hyperglycaemia
- Diabetic keto-acidosis

**2.7 Imaging**

Understand the principles of imaging techniques, their application and interpretation included in the emergency care situation under the following headings.

- Chest radiography
- Ultra sound
- Duplex Doppler
- Computerised axial tomography
- Magnetic resonance imaging
- Isotope scanning

**2.8 Pharmacology**

Understand the pharmacology of commonly used drugs in surgical practice and the principles of their appropriate use.

- Drugs used for sedation and analgesia
- Antibiotics
- Steroids
- NSAIDS

**2.9 Infection and Antimicrobials**

Understand the principles of the prevention and treatment of infection under the following headings

- Asepsis and sterile technique
- Surgical technique
- Prophylactic antibiotics
- Therapeutic antibiotics

**2.10 Blood transfusion**

Understand the principles governing the use of blood and blood products and their practical application under the following headings.

- Blood groups and cross matching
- Indications for transfusion
- Transfusion reactions
- Massive transfusion

**2.11 Intra-Operative Care**

Understand the principles involved in the practical and safe application of intra-operative surgical care relating to the following topics

- Aseptic and antiseptic techniques
- Hazards and precautions in operating theatres
- Energy and imaging devices used in theatre.
- Diathermy
- Unipolar
- Monopolar
- Harmonic scalpel
- Laser

**2.12 Post-operative complications**

Understand the mechanisms of postoperative complications and the principles of prevention and management in relation to the following topics.

- Haemorrhage
- Fever
- Post operative confusion
- Respiratory distress
- Cardiac dysfunction
- Urinary tract complications
- Surgical site infection

**FCS INTERMEDIATE PAPER 2 - PRINCIPLES OF THE SURGICAL SPECIALITIES****General objectives**

The candidate is required to know and understand the principles of the major specialities of surgery. It is expected that the candidate will have the theoretical knowledge and practical skills to deal with:

- all aspects pertinent to the resuscitation and emergency treatment of acute surgical conditions in both adults and children
- all aspects of patient care related to the surgical specialities pertinent to the management of the surgical patient in the peri-operative period, including the intensive care unit

**3.0 GENERAL SURGERY****3.1 Abdominal conditions**

Understand the pathophysiology and the principles of diagnosis and management of abdominal emergency conditions due to

- Intra-peritoneal inflammation (localised or generalised)
- Retroperitoneal inflammation
- Obstruction of a hollow organ
- Haemorrhage (intra-peritoneal or intraluminal)
- Trauma (blunt or penetrating)
- Obstetric and gynaecological diseases
  - Ectopic pregnancy
  - Pelvic inflammatory disease
  - Ovarian torsion
  - Vaginal bleeding
- Medical conditions simulating acute abdominal emergencies

**3.2 Wound Healing**

Understand the principles of wound healing and the treatment of wounds including:

- Classification and types of wound
- Techniques of excision and debridement
- Wound management and dressings
- Suture materials
- Mechanical staplers
- Closure of incised wounds
- Bites
- Tetanus and gas gangrene prophylaxis

**3.3 Neurosurgery**

Understand the principles of the pathophysiology assessment and emergency management of acute neurosurgical conditions in relation to the following.

- Conscious level assessment (Glasgow Coma Score)
- Coma
- Head injuries
- Raised intracranial pressure
- Prevention of secondary brain injury
- Decompression of extradural haematoma
- Brain Death
- Acute spinal cord injury
- Infection of the central nervous system
- Fluid and electrolyte abnormalities

**3.4 Ear, Nose and Throat Surgery**

Understand the principles of treatment of the following ENT emergency conditions

- Trauma: Penetrating and blunt
  - Pharynx
  - Larynx
  - Trachea
  - Cervical Oesophagus
- Upper airway obstruction
- Ingestion of caustic agents
- Foreign bodies in the upper airway or oesophagus

**3.5 Ophthalmology**

Understand the principles of treatment of the following ocular emergency conditions

- Ocular trauma
- Intra-orbital bleeding
- Peri-orbital infections with threatening blindness

**3.6 Maxillo Facial Surgery**

Understand the principles of diagnosis and treatment of the following maxilla-facial emergency conditions:

- Facial fractures (blunt and penetrating)
  - Recognition in relation to airway compromise
- Head and neck infections
  - Management
  - Microbiology

**3.7 Orthopaedic Surgery**

Understand the principles of diagnosis, assessment and the practical emergency management of the following common orthopaedic conditions emergency:

- Osteomyelitis and acute septic arthritis
- Limb fractures and joint dislocations
  - Classification of fractures and dislocations
  - Splintage and immobilisation
  - Neurovascular deficits
- Hand injuries and infections
- Pelvic fractures

### 3.8 Spinal injuries

Understand the principles of diagnosis, assessment and the practical emergency management of spinal injuries under the following headings:

- Mechanism of injury
- Radiological recognition of cervical and thoraco-lumbar
  - Fractures
  - Dislocations
  - Fracture dislocations
  - Assessment of instability and neurological deficits
- Principles of treatment
- The application of Halo and Cone calliper
- The “plegic” patient
  - Neuro-physiology of the spinal cord injury
  - Haemodynamic changes
  - Acute resuscitation
  - Neuro-pathology of the spinal cord
    - Complete / incomplete lesions
    - Anterior cord syndrome
    - Central cord syndrome
    - Prevention of complications

### 3.9 Urology

Understand the principles of diagnosis and management of the following urological emergencies:

- Genito-urinary trauma
- Urinary tract infections
- Scrotal emergencies
- Haematuria
- Acute retention of urine
- Urinary catheter management

### 3.10 Cardiothoracic Surgery

Understand the pathophysiology and the principles of diagnosis and management of the following conditions:

- Trachea and bronchus injury and rupture
- Foreign bodies in the trachea, bronchus and oesophagus
  - Techniques of removal
  - Types of anaesthetic required
- Non-penetrating chest trauma
- Penetrating wounds of the thorax
- Management of pleural collections
  - Simple pneumothorax
  - Open pneumothorax
  - Tension pneumothorax
  - Haemothorax
  - Massive haemothorax
- Tube thoracostomy
- Management of acute broncho pleural fistulae
- Penetrating wounds of the thorax inlet
- Penetrating wounds of the heart
- Cardiac tamponade
- Aorta: dissection and rupture
- Rib fractures: single, multiple and segmental
- Diaphragmatic injury

- Injuries of the oesophagus.../

- Injuries of the oesophagus
  - traumatic
  - spontaneous
  - iatrogenic
- Pleural and pulmonary infection
  - Post-pneumonic empyema
  - Tuberculous empyema
  - Chronic broncho-pleural fistula
  - Lung abscess

### 3.11 Vascular Surgery

Understand the pathophysiology, principles of diagnosis and emergency management of acute vascular emergencies

- Haemorrhage control
- Arterial and venous trauma (penetrating or blunt)
- Acute arterial embolism
- Acute arterial thrombosis
- Complicated aneurysms
- Acute thrombophlebitis
- Deep vein thrombosis
- Compartment syndrome
- Mangled extremity
- Reperfusion syndrome

### 3.12 Paediatric Surgery

Understand the physiology, pathophysiology and principles of the diagnosis and practical management of paediatric patients (neonates and children) in relationship to emergency surgical conditions under the following headings:

- Physiological differences between neonates and children and adults in respect of the following:
  - Haematological parameters
  - Respiratory function
  - Cardio-vascular physiology
  - Jaundice
- Peri-operative management of the paediatric patient in respect of the following:
  - Transport of neonates and children
  - Venous access
  - Fluid and electrolyte management
  - Blood and blood product usage
  - Pain management
  - Renal failure
- Assessment and emergency management of the following surgical conditions:
  - Blunt and penetrating abdominal and thoracic trauma
  - Strangulated inguinal hernias
  - Oesophageal foreign bodies
  - Burns
- Recognition and institution of appropriate supportive care for the following specific neonatal conditions:
  - Oesophageal atresia and oesophago-tracheal fistulae
  - Bochdaleck hernia
  - Exomphalos
  - Intestinal obstruction
  - Anus imperforatum

### 3.13 Plastic Surgery

Understand the principles of plastic surgery and their practical application under the following headings:

- Wound and wound healing
  - Pathophysiology
  - Classification and types of wound
  - Techniques of excision and debridement
  - Closure of incised wounds
  - Suture materials
  - Principles of wound cover
    - Split skin grafts
    - Local flaps
    - Free flaps
    - Management of the open wound
    - Dressings and modern aids to wound healing
- Thermal Injury
  - Understand the mechanisms of thermal injury and their management through all phases of treatment under the following headings:
    - Mechanisms
      - Thermal: hot / cold
      - Electric: high and low tension
      - Chemical: acid and alkaline
    - Resuscitation
      - Inhalational burns
      - Burns degree and area assessments size assessment
    - Management of the burn wound
    - Rehabilitation
- Soft tissue injury:
  - Understand the pathophysiology of local and systemic effect of soft tissue injury and its treatment under the following headings:
    - Compartment syndrome
    - Rhabdomyolysis
    - Reno protective strategies
    - Reperfusion injury
    - Degloving injury

### 3.14 Techniques

Understand the anatomical details and be technically competent to perform the following procedures:

- Airway maintenance
  - Bag mask ventilation
  - Endotracheal intubation
  - Surgical cricothyroidotomy
  - Tracheostomy
- Intra-vascular access
- Tube thoracostomy
- Nasogastric tube placement
- Bladder catheterisation
- Embolectomy
- Limb fasciotomy
- Emergency burr holes

**SUGGESTED READING FOR THE FCS(SA) INTERMEDIATE EXAMINATION**

In preparation for the FCS(SA) Intermediate examination, the postgraduate student's reading should not be limited to the suggested texts. Much of the information necessary for the examination will be acquired during training on the wards, intensive care and trauma units.

The following texts contain the basic material and approach necessary for both of the FCS(SA) Intermediate papers:

- The Handbook of Surgical Intensive Care. Lysterly HK, Gaynor JW, Mosby Yearbook.
- The ICU Book. Marino PL. William and Wilkens
- Handbook of Trauma for Southern Africa. Nicol & Steyn. Oxford
- Oh TE. Intensive Care Manual. 3<sup>rd</sup> ed. Sydney: Butterworths, 1996. Intensive Care Manual. Oh TE, Butterworth Heineman
- Trunkey, Lewis. Current Therapy of Trauma. 2<sup>nd</sup> ed. BC Dekker, 1999
- Schwartz SI, Shires GT. Principles of Surgery. 7<sup>th</sup> ed. New York; London: McGraw-Hill, Health Professions Division, 1997
- Christopher. F. Davis-Christopher Textbook of Surgery: The Biological Basis of Modern Surgical Practice: Sabiston Textbook of Surgery:. 16<sup>th</sup> ed. Philadelphia; London: WB Saunders, 2000
- Principles of Surgical Patient Care 2<sup>nd</sup> Edition. Mieny CJ, Mennen U, New Africa Education.
- Review of Medical Physiology. Ganong WF, Appelton & Lange.
- Intensive Care Medicine. Irwin and Rippe
- Surgical Intensive Care. Barie FS, Shires GT, Library Congress Cataloging in Publication Data.
- ATLS Manual American College of Surgeons 4th Edition
- Paediatric Work Book First Edition Ed. JH Becker. Published Van Schaik Pretoria 2006

## APPENDIX C<sup>2</sup>

### Portfolio of Learning: Guidelines

1. As from March 2014, candidates for the Final Examination for the Fellowship of the College of Urologists will be required to submit a Portfolio of Learning, completed while the candidate was in a training post approved and registered by the Medical and Dental Board of the Health Professions Council of South Africa. The current logbook (instructions as detailed in the Regulations of May 2007) will be required up to the examination of August/October 2013.
2. Full details about the Portfolio are available on the website of the Colleges of Medicine of South Africa (CMSA), in the section dealing with the College of Urologists.
3. Prospective candidates must continually update their Portfolio during the course of their training, as prescribed in the Portfolio document available on the CMSA website.
4. The Portfolio must be submitted three months prior to the written examination in order to reach the Convenor of the particular examination timeously, so that the Convenor and Examiners have sufficient time to evaluate the Portfolio.
5. Failure to submit the Portfolio before this date, or submission of a Portfolio which, in the opinion of the Convenor and Examiners, does not provide sufficient evidence of adequate learning, will result in the candidate (1) not being allowed to sit for the written part of the examination.

## APPENDIX D

### GUIDELINES FOR CANDIDATES ENTERING THE FC UROL(SA) FINAL EXAMINATIONS

**1.0 The syllabus includes the theory and practice of the full spectrum of clinical urology, including (but not limited to) the following topics:**

- 1.1 Congenital anomalies of the urogenital system, including intersex disorders
- 1.2 Trauma of the kidney, ureter, bladder, urethra and external genitalia
- 1.3 Infections of the urinary tract and male genital system
- 1.4 Obstructive uropathy
- 1.5 Neuromuscular dysfunction of the lower urinary tract
- 1.6 Disorders of continence and voiding, female pelvic floor dysfunction / pelvic organ prolapse.
- 1.7 Urethral stricture disease
- 1.8 Interstitial cystitis and prostatitis
- 1.9 Urolithiasis
- 1.10 Renal cystic diseases
- 1.11 Renovascular diseases
- 1.12 Principles of dialysis, renal transplantation and immunosuppression
- 1.13 Neoplasms of the kidney, adrenal, retroperitoneum, ureter, bladder, prostate, urethra, penis, testis and spermatic cord
- 1.14 Scrotal swellings
- 1.15 Erectile dysfunction and ejaculatory disorders
- 1.16 Male infertility

**2.0 The examination may include questions on ethical issues related to the practice of Urology**

#### SUGGESTED READING – BOOKS

1. Wein AJ, Kavoussi LR, Novick AC et al. *Campbell-Walsh Urology*, 9<sup>th</sup> Ed, WB Saunders 2007
2. Tanagho EA, McAninch JW. *Smith's General Urology*, 17<sup>th</sup> Ed, 2008
3. Thomas D, Duffy PG, Rickwood A. *Essentials of Pediatric Urology*, 2008
4. Graham SD, Keane TE. *Glenn's Urologic Surgery*, 6<sup>th</sup> Ed, 2004
5. King, Lowell R; Belman, A Barry; Kramer, Stephen A. *Clinical Pediatric Urology*, 4<sup>th</sup> Ed, 2001
6. Hohenfellner M, Santucci R. *Emergencies in Urology*, 2007
7. Godbole P, Gearhart J, Wilcox D. *Clinical Problems in Pediatric Urology*, 2006
8. Nakada SY, Pearle MS. *Advanced Endourology: the complete clinical guide*, 2006
9. Weiss RM, George NJR, O'Reilly PH. *Comprehensive Urology*, 2001

#### JOURNALS

1. The Journal of Urology
2. BJU International
3. Urology
4. Contemporary Urology
5. Urological Clinics of North America
6. European Urology
7. Current Opinion in Urology
8. Seminars in Urology

**FORMAT**

The format of the Final examination consists of the following:

Assessment method	Question Papers: Online Typed Component of the Fellowship examination		Clinical Performance Component of the Fellowship examination (formerly Oral Examinations)			
	Paper I: SAQ	Paper II: SAQ	Clinical cases (2)	OSCE (6-10 stations)	Viva/ 'Oral'	Paper Cases
Weighting	15%		25%	30%	20%	10%
Examination time	3 hours (Plus type concession time of 45 min/paper)	3 hours (Plus type concession time of 45 min/paper)	60 mins	100 mins	20-40 min	20-40 min

SAQ = short answer questions  
 OSCE = objectively structured clinical examination

**“Question Paper” Component****Paper 1 & Paper 2: Short answer questions (SAQ)**

- EXAMINATION Answers will be **Typed using the Speedwell system**
- Please note: The examination is **NO LONGER hand-written**
- **Two** 3-hour Examinations will be conducted (additional type concession time of 45 min/paper will be offered to candidates who may require it)
- Each paper consisting of 4 Questions each, with 4-6 sub-questions (5-10 Marks each).
- Each paper mark Totals 150
- This will consist of 4 sections, each set by a different examiner. Each section may contain 4-6 sub-sections or questions. The purpose of the SAQ is to test knowledge over as wide a range of topics as possible.

An overall combined percentage from both papers of 50% or more allows an invite into the performance component of the examination previously called the ‘ORAL EXAMINATION’. Performance component of the Fellowship examination includes Short Clinical cases, OSCE, Viva and Paper cases.

**Short Clinical cases**

There will be 2 short clinical cases, each with one examiner, and each lasting 20 minutes per case. The objective of the Short Cases will be to test the candidate’s clinical acumen and ability to arrive at the correct diagnoses and management decisions. The examiners should be from within the indexed semester exam cycle and at least one examiner from outside the exam center. This will be conducted at an appropriate healthcare facility, hospital, university or clinical venue setting.

**OSCE**

There will be at least 6-10 stations, each with one examiner and lasting 10 minutes. Where possible, all candidates will go through the same OSCE stations. These will be designed to test the whole spectrum of clinical competencies and the widest possible range of topics. They may consist of stations such as: take a relevant, focused history (eg a patient with erectile dysfunction); interpret an imaging study (eg IVP, CT scan); interpret a urodynamic tracing or other special investigation; make a spot diagnosis from a photograph or slide; discuss management options of a specific condition; describe a specific surgical procedure. This will be conducted via ZOOM/SKYPE platform using the College Venue (CMSA).

**Viva (Oral Discussion)**

There will be an oral examination of 20-40 minutes, where each candidate will be questioned by examiners, who will ask the same questions of each candidate, where possible.

This will be conducted via ZOOM/SKYPE/Online platform using the College Venue (CMSA).

**Paper Cases**

These cases involve results and displays of paper based pathology or related material. This will be conducted via ZOOM/SKYPE/Online platform using the College Venue (CMSA).

**Overall Pass regarding Stations and percentages**

Candidates must pass the entire Final examination with an **overall percentage score of 50%** or more, based on the total weighting above (see **Table** under FORMAT segment above). We also stipulate that candidates must achieve an **overall combined score of 50% (42.5 / 85 percent weighting score) or more** for the combined **Clinical Performance Component of the Fellowship examination** (formerly Oral Examinations) assessment process which includes the Clinical cases, OSCE, Viva and Paper Cases in order to be eligible to graduate this fellowship examination.

**JOHANNESBURG**  
**October 2021**
